Why monitoring and predict solar plant performance?

Increasing the production efficiency of solar photovoltaic systems

Forecast the production in order to increase the economical turn over of the investement.
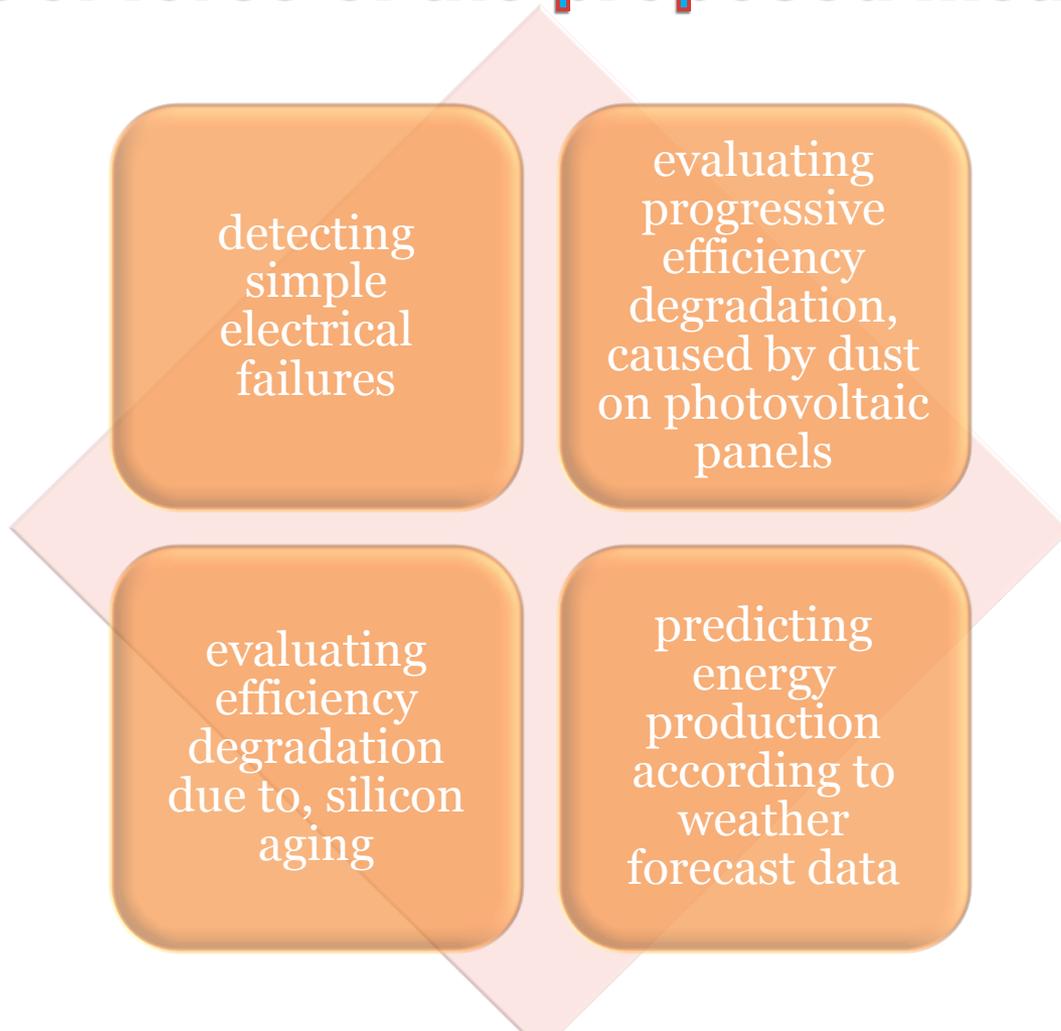

Predict failures and out of production

Maintaining plant in a efficient way

# What are the key point of an efficient PV system?

The plant must always work at its maximum designed efficiency even considering equipment degradation due to aging

Variability in energy production must be exclusively due to unavoidable irradiance, working temperature and wind speed fluctuations.
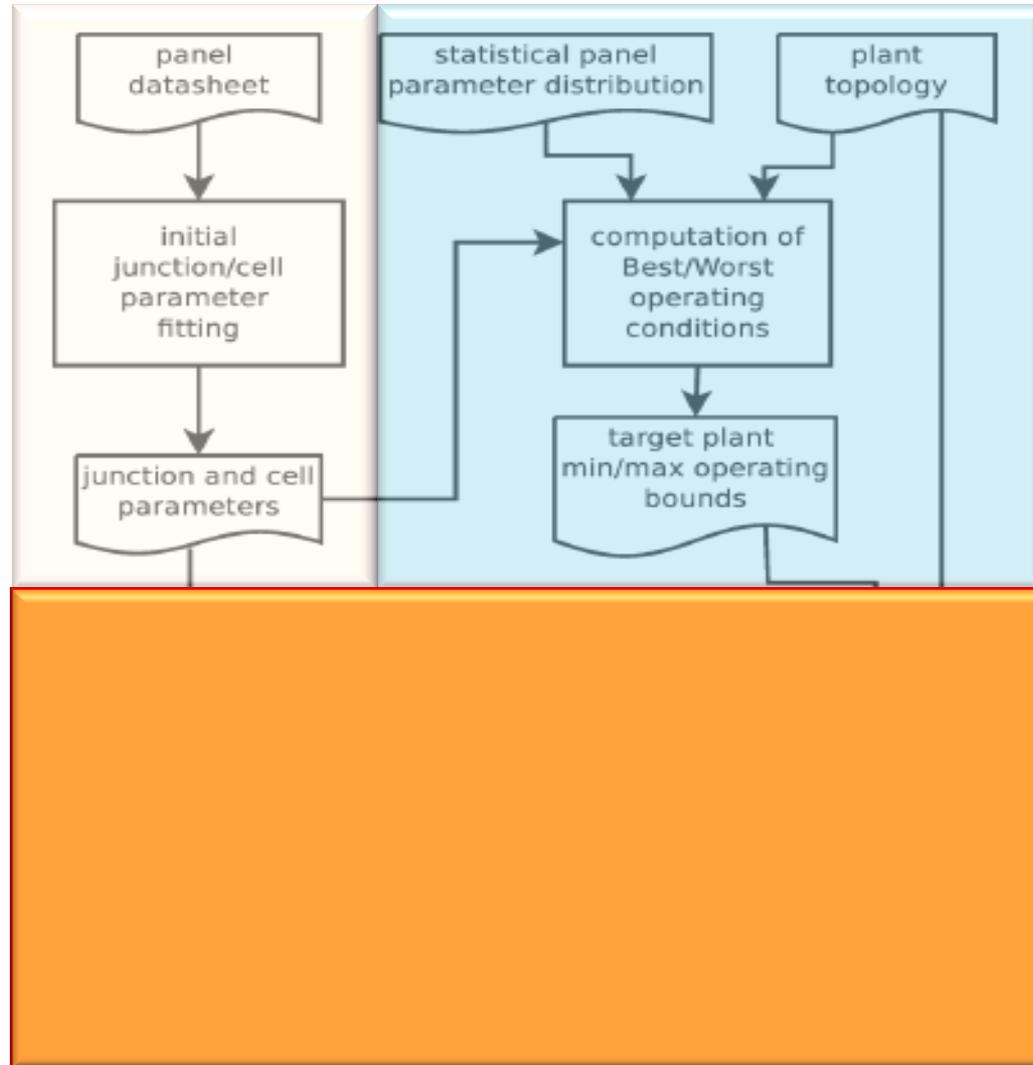

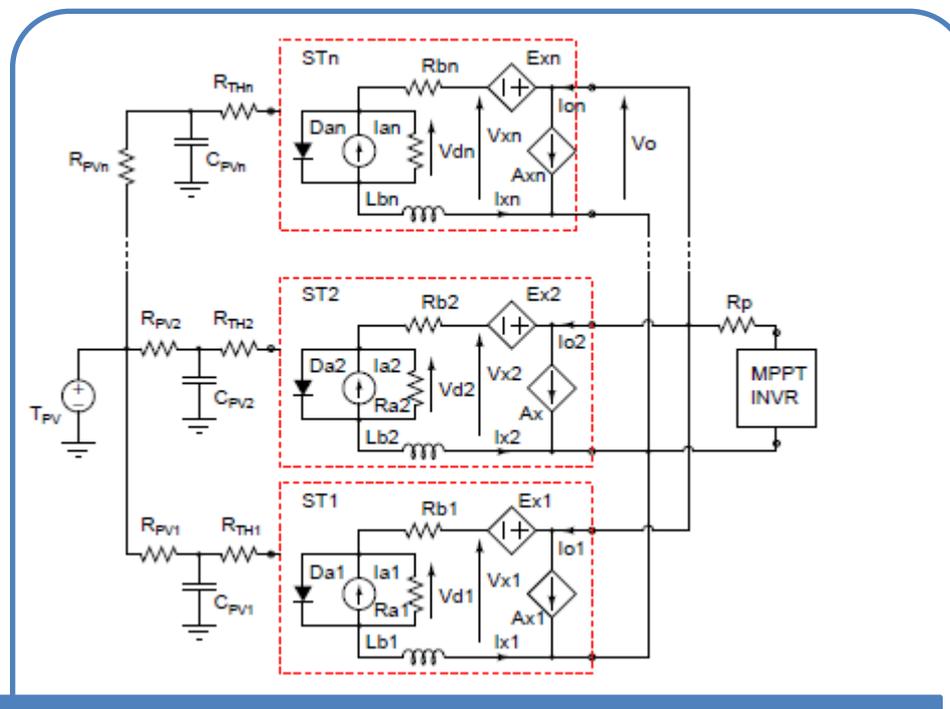

Point of force of the proposed method?

detecting simple electrical failures

evaluating progressive efficiency degradation, caused by dust on photovoltaic panels

evaluating efficiency degradation due to, silicon aging

predicting energy production according to weather forecast data

MacroModel of the cell

Temperature of the panel as a function of ambient temperature, irradiance and wind as follows

$$T_{PV} = T_{amb} + \frac{S\left(T_{noct} - T_o\right)}{S_o + h\left(\nu - \nu_o\right)\left(T_{noct} - T_o\right)}$$

Table I
FITTING PROFILE: CS6P-235.

	STC			NOCT		
	Fit	Meas	Err %	Fit	Meas	Err %
V_{mpp}	29.02	28.00	3.6%	26.60	27.20	-2.2%
P_{mpp}	235.00	235.00	0.0%	171.31	170.00	0.7%
V_{oc}	36.90	36.90	0.0%	33.66	33.90	-0.7%
I_{sc}	8.46	8.46	0.0%	6.76	6.86	1.5%

STC: fitted and given parameters at STC.
NOCT: fitted and given parameters at nominal operation condition.
Fit: fitted parameters. Meas: given parameter.
Err %: relative error of the fitted parameter.

Table II
FITTING PROFILE: LDK-230P

|	STC			NOCT		
	Fit	Meas	Err %	Fit	Meas	Err %
V_{mpp}	28.61	29.30	-2.3%	26.06	26.50	-1.6%
P_{mpp}	230.52	230.00	0.2%	166.99	167.00	0.0%
V_{oc}	37.87	36.90	2.6%	34.20	34.20	0.9%
I_{sc}	8.43	8.46	0.4%	6.74	6.82	-1.2%

Comparison along one week of measured data versus simulation
results for a sub-plant of a 500kW nominal power solar plant.
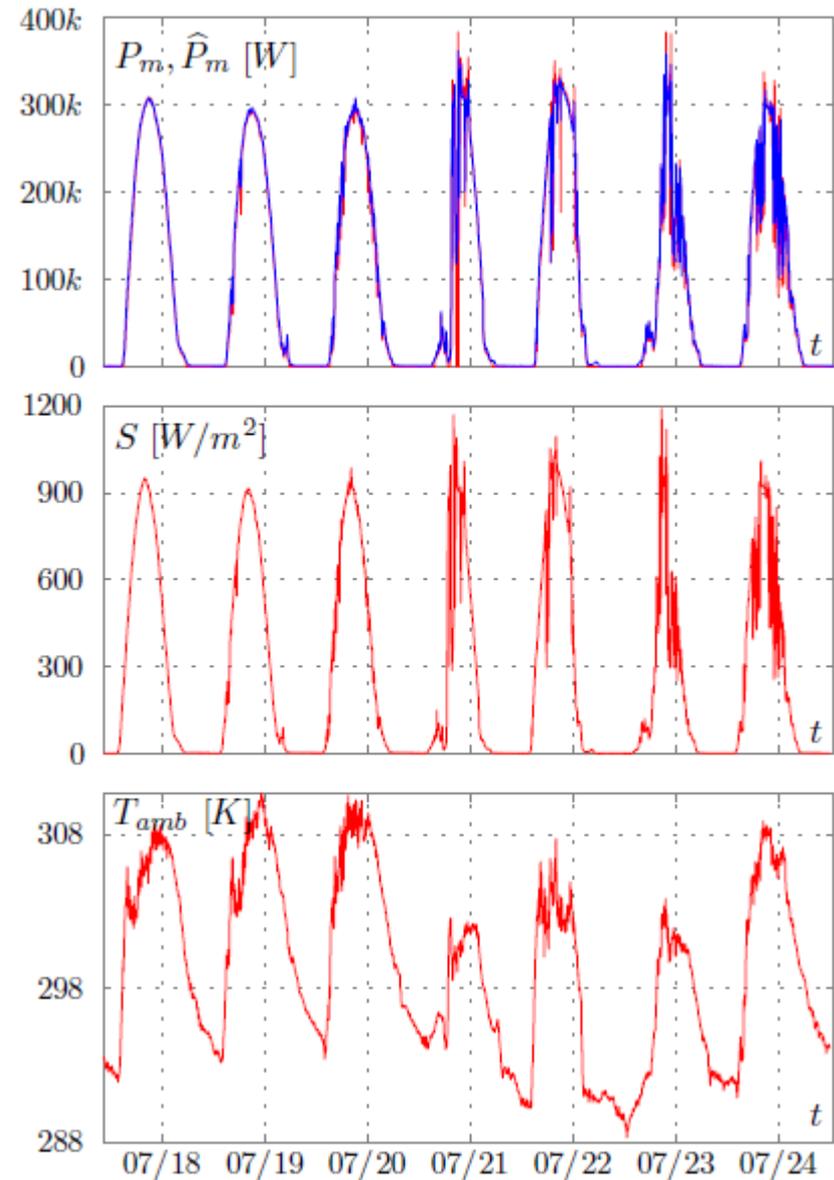

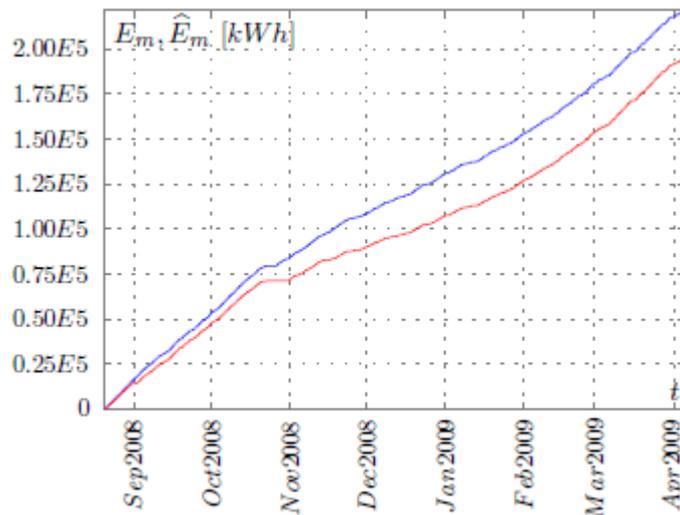

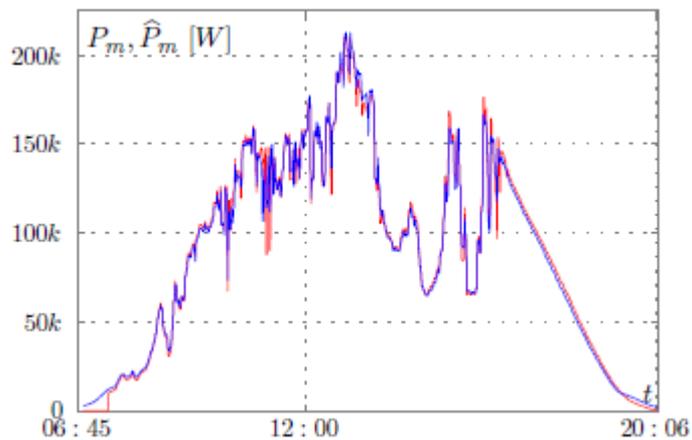

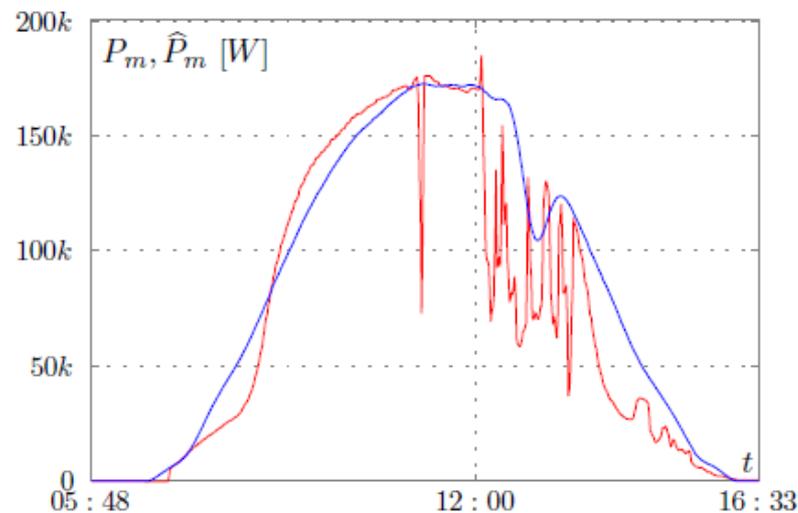

Measured (Pm, in red) and simulated (b Pm, in blue) power duringa cloudy day

Anomalous behaviour (in this case due to the MPPT).

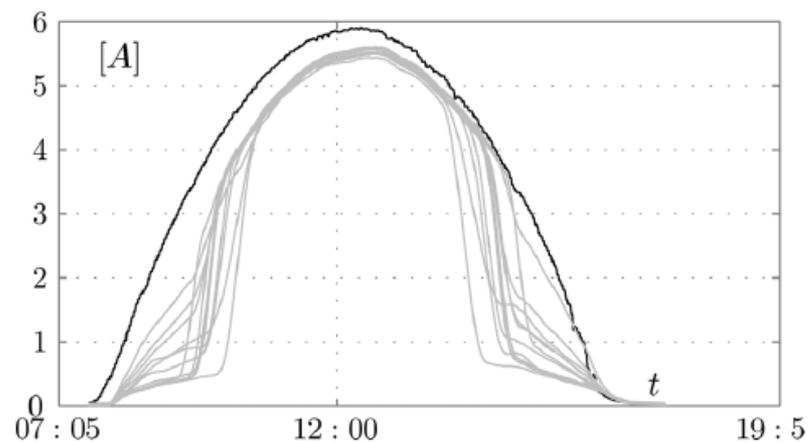

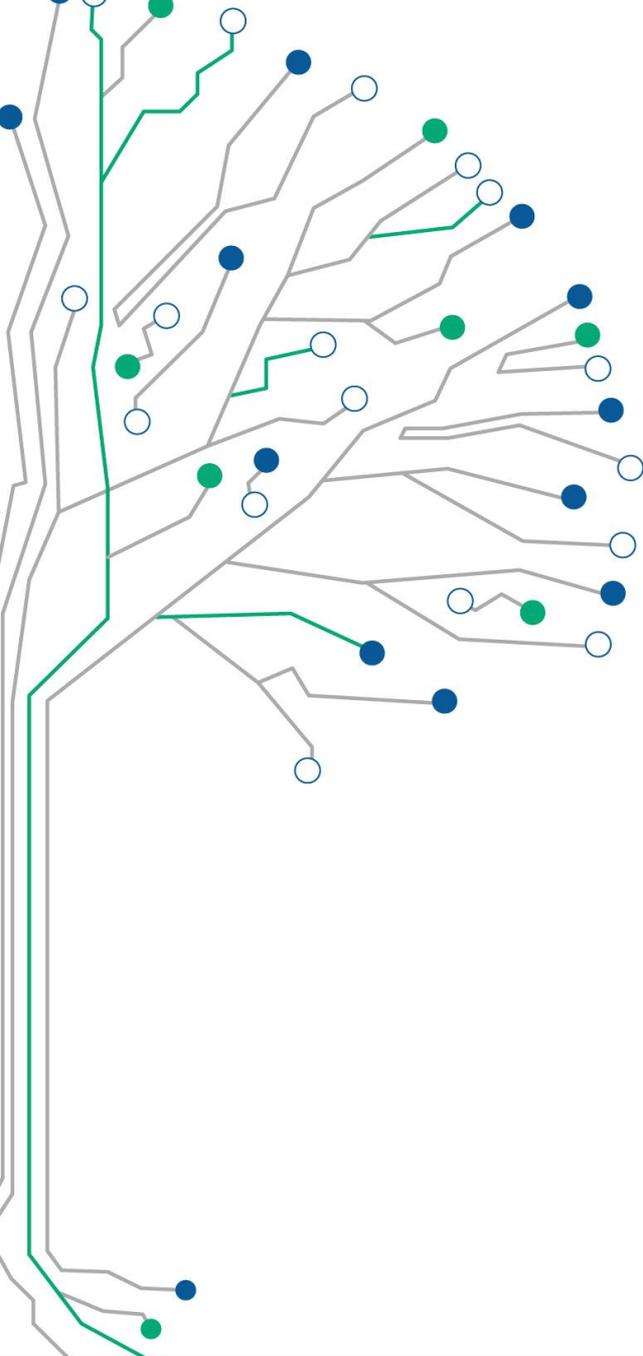

Fig. 10. Simulated, in black, and measured, in light gray, average currents flowing through the string-boxes during the same day of Fig. 9.
